

Growth and expansion. BrickStreet 360° is wherever you need it. And that's why businesses are coming home to BrickStreet. Our 360° business teams provide a single, local point of contact for your company no matter the size, location or scope of your business. If your company expands or needs coverage in other states, we can tailor our services to match your needs. Whatever direction your business may take, BrickStreet will be there for you.

We're in state, on-site and all around your business.

"We began with BrickStreet, we have grown with BrickStreet and we will stay with BrickStreet."

-Mike Poole, President
Highlands Drilling

BRADFORD WHITE
HIGH PERFORMANCE SERIES™
25 and 55-GALLON WATER HEATERS

Bradford White's new High Performance Series™ provides incredible hot water delivery from a space-saving, convenient package. When tested to the industry standard residential First Hour Delivery procedure, the 25-gallon model (CX2-25S) can provide 155 gallons and the 55-gallon model (CX2-55S) will deliver 200 gallons.

HOW IT WORKS - The High Performance Series combines four design technologies to achieve its amazing performance:

HIGH INPUT - The inputs on the High Performance Series are 75,000 BTU/hr for the CX2-25S and 80,000 BTU/hr for the CX2-55S.

HELICAL FIN-FLUE

- Maximizes surface area and heat exchange capabilities so that the high heat inputs can be efficiently transferred to the water.
- The unique flue design helps the High Performance Series achieve the most efficiency ratings of 92%.

OPTIMIZE™ TEMPERATURE CONTROL SYSTEM

- Allows water in the tank to be stored at higher temperatures (up to 120°F) while controlling the hot water outlet temperature to a safe and comfortable level.

• Increases performance by improving the blend factors used to bring the outlet water temperature down to the desired set point.

HYDROJET™ TOTAL PERFORMANCE SYSTEM

- Designed specifically for higher input applications.
- Minimizes sediment build-up.
- Increases delivery.
- Reduces the need for filtration.
